

A SUPERCOMPUTER IN YOUR POCKET

1969: Landed man on the moon.

Today: Millions of times more powerful.

You are carrying a supercomputer. Most people use it only for WhatsApp and TikTok.
It is time to understand the machine you are holding.

IN, THINK, AND OUT

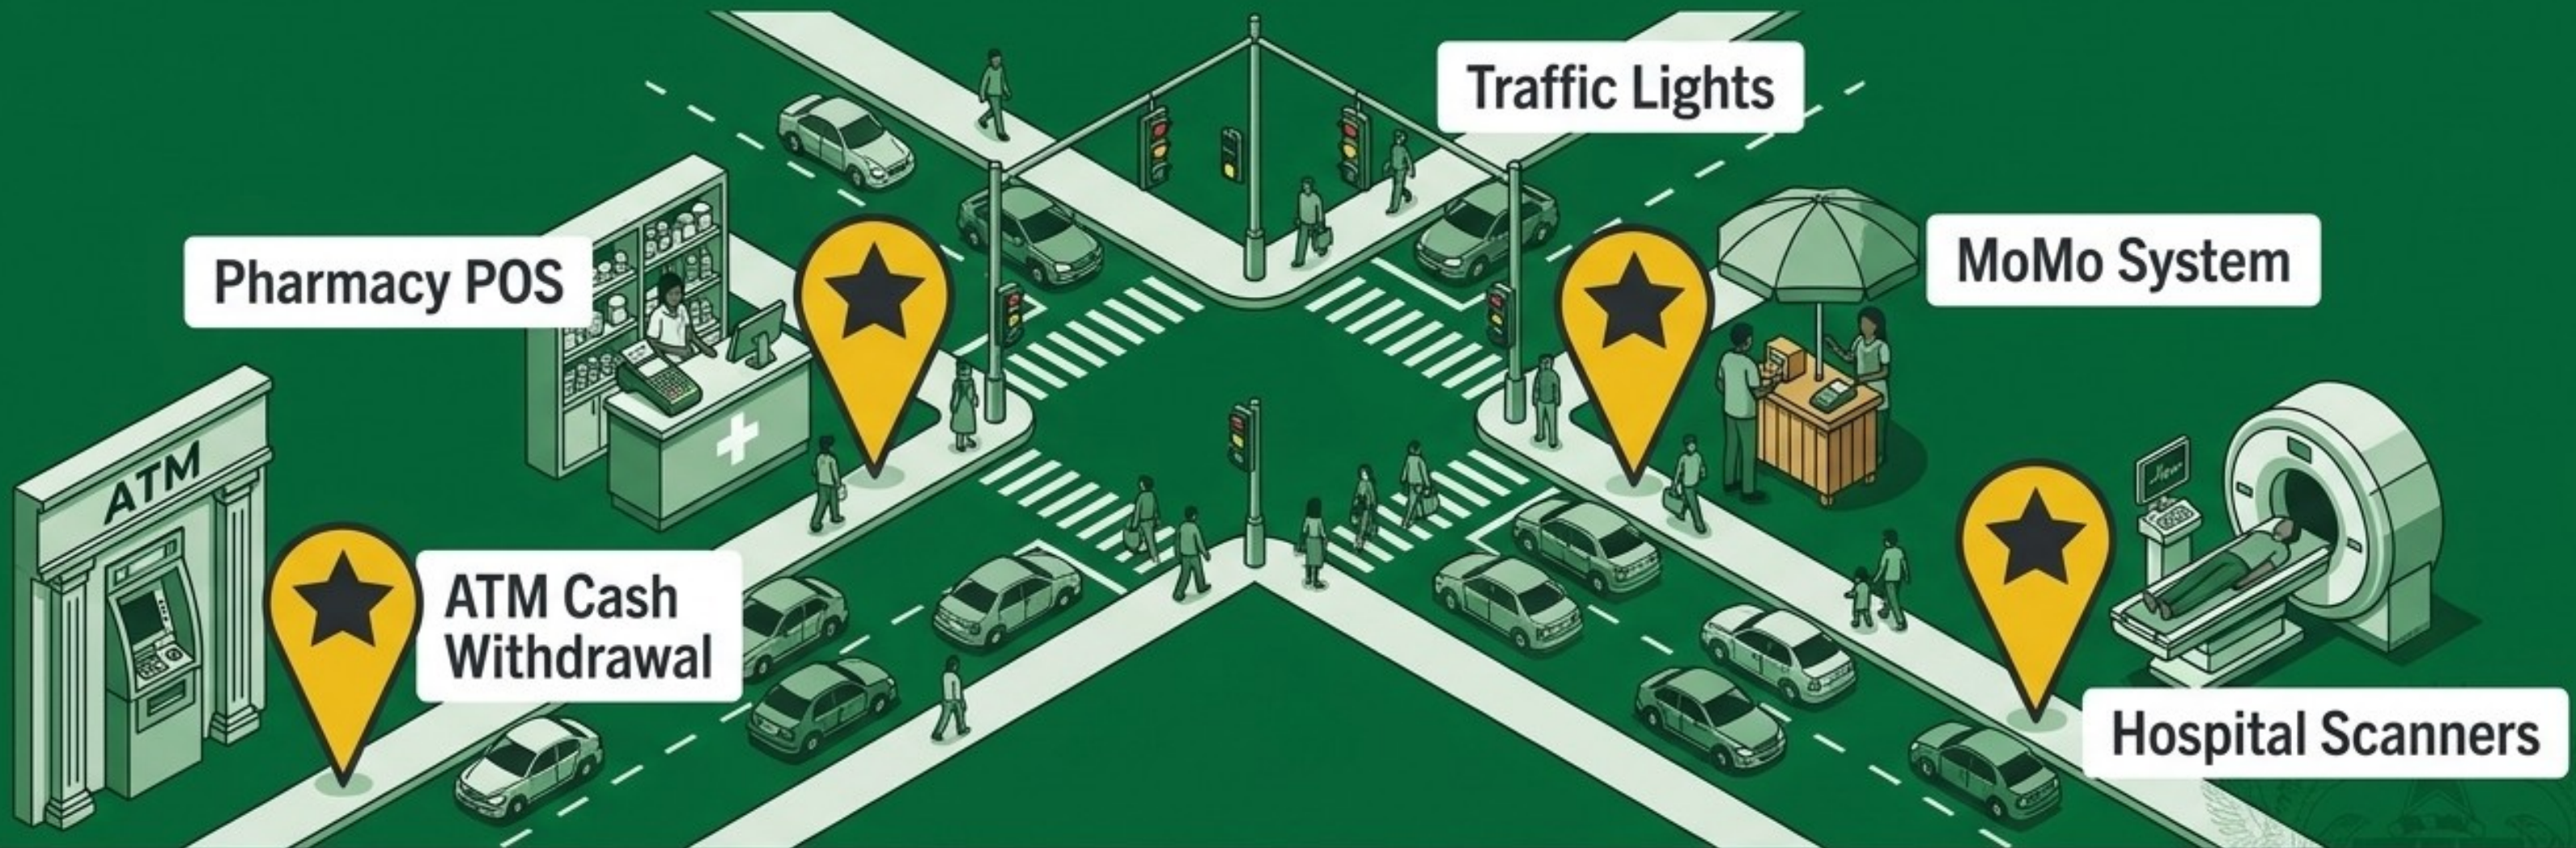

Forget the big definitions. Type a number, get an answer. Ask a question, get a reply. Any machine that follows this rule is a computer.

GHANA

THE HIDDEN COMPUTERS AROUND YOU

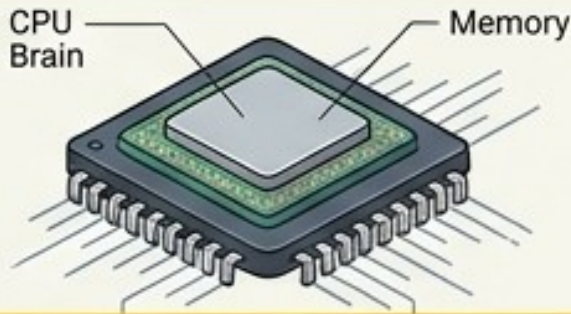

We picture a laptop in an office. But you **interact with 5 to 10 computers** before noon and don't even notice. The Ghanaian who understands these machines controls them.

HOW A COMPUTER ACTUALLY THINKS

INPUT

What you put in. (Typing your MoMo PIN and GHS amount).

PROCESS

The thinking part. (The MTN system checks your balance and confirms).

OUTPUT

What comes back. (The vendor gives cash, you get an SMS).

In, think, out. Every single time.

THE BODY AND THE SPIRIT

HARDWARE

The Body

- ★ The screen
- ★ The battery
- ★ The microchip

Things you can physically touch.

SOFTWARE

The Spirit

- ★ WhatsApp
- ★ The MoMo App
- ★ Android OS (The Boss)

The invisible instructions inside.

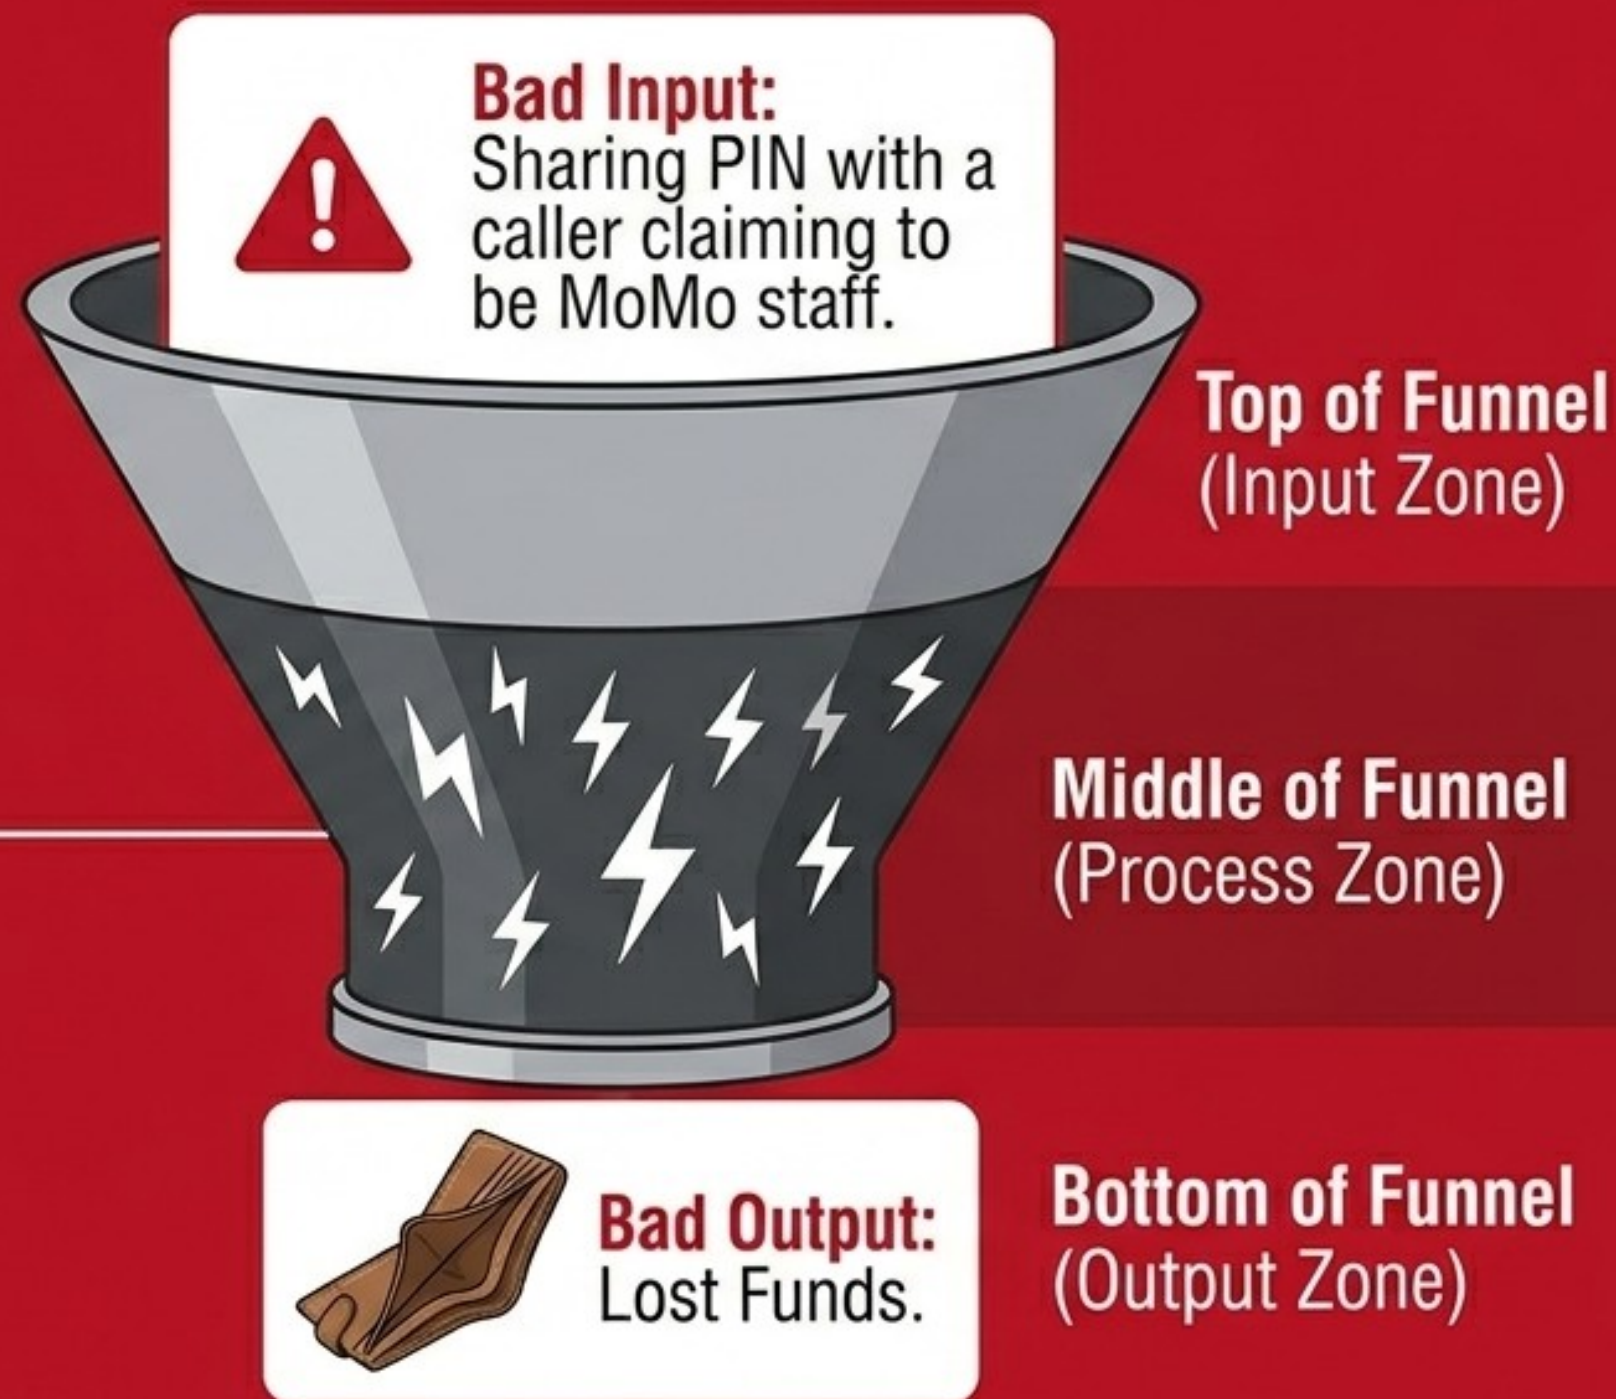

Hardware (Phone) + Software (TikTok) = Your whole online business.
A phone with no software is just a shiny stone.

GHANA

GARBAGE IN, GARBAGE OUT

The computer processes it blindly and instantly. It has no common sense.

A computer is powerful but not wise. It does exactly what you tell it—nothing more.
It does not protect you on its own. You are the one in charge.

GHANA

THE GREAT EQUALISER

With one computer and internet, a young person in a single room in Tamale can run a shop that sells to Accra, learn for free, and receive money from anywhere.

No big capital required.
This is why we teach it free.

70%

TEACH ONE NEW PERSON TODAY

★ The 3 Jobs

What are the 3 jobs every computer does?

(Input, Process, Output)

★ The Phone

Give one example of Hardware and Software right now.

(Hardware: The screen you're touching.
Software: The app you're using).

★ The Rule

Does a computer have common sense?

(No. Garbage In = Garbage Out).

YOUR CHALLENGE: Point out 3 computers around you today that people don't call 'computers'. Then teach someone what you just learned.
